先给 S.List 定义时长度设为 10000, L.List 也是.

$$S' \rightarrow S \quad \text{for (int } i=0; i < S.len; i++)$$

$$cout << S.List[i] << ' ';$$

$$S \rightarrow (L) \quad S.len = L.len + 2;$$

$$S.len = L.len;$$

$$\text{for (int } i=0; i < S.len; i++)$$

$$S.List[i] = L.List[i] + 1;$$

$$S \rightarrow a \quad S.len = 1;$$

$$S.len = 1;$$

$$S.List[0] = 1;$$

$$L \rightarrow L_1.S \quad L.len = L_1.len + S.len + 1;$$

$$\text{for (int } i = L_1.len; i < L_1.len + S.len; i++)$$

$$L.List[i] = L_1.List[i - L_1.len];$$

$$L.len = L_1.len + 1 + S.len;$$

$$L.len = L_1.len + S.len;$$

$$L \rightarrow S \quad L.len = S.len;$$

$$L.len = S.len;$$

$$\text{for (int } i=0; i < S.len; i++)$$

$$L.List[i] = S.List[i];$$

len 为串长, lena 为 a 个数, List 中存 a 川顺序排序后 a 的位置
